Bottle 2 Pen

*The World's First Recycled Pen
Made From A Plastic Bottle!*

The Story Of Bottle 2 Pen

In recent years, plastic water bottles have been under close scrutiny for their environmentally unfriendly characteristics. Almost every hour, close to 250,000 plastic bottles enter landfills and comprise close to 50 percent of the recyclable waste.

Made from 89 percent post-consumer recycled plastic bottles, the B2P features vibrant gel ink and a fine 0.7mm point for smooth, effortless writing. Designed to mimic a bottle of water, the body of the B2P pen is translucent blue with unique striations like those commonly found on water bottles. Retractable and refillable, the B2P uses the same ink refill as the Pilot G2, America's number one selling gel pen*. Available in black, blue and red ink, the writing quality of the B2P meets the same high performance standards found in all of Pilot Pen's products.
